Summary

AI/ML engineer with a B.Sc in Artificial Intelligence & Machine Learning. Builds and deploys full-stack AI applications independently — architecture, backend, frontend, and the ML pipeline. Comfortable working across OCR, local LLM integration, and predictive modeling.

Education

Kongunadu Arts and Science College (KASC), Bharathiar University

2023 – 2026

B.Sc in Artificial Intelligence & Machine Learning | CGPA: 8.072

Coimbatore, Tamil Nadu

Vidhya Vikashni Matric Higher Secondary School

2021 – 2023

HSC — Biology with Computer Science | 86%

Tirupur, Tamil Nadu

Experience

Adhoc Softwares Pvt Ltd

Apr 2025 – May 2025

AI Developer Intern

Coimbatore, Tamil Nadu

- Developed and evaluated ML models for predictive analytics, integrating outputs into live workflows via **Flask REST APIs**.
- Refactored API routing and inference logic, improving chatbot accuracy and reducing backend latency.
- Automated data processing pipelines using Python, eliminating recurring manual workflows.

Projects

Docima — *Offline AI Document Extraction Desktop App* | Python, PaddleOCR, Ollama, FastAPI, React, SQLite, ChromaDB **2026**

- Redesigned the backend from Celery/Redis to **FastAPI BackgroundTasks + asyncio queues with SSE streaming**, sharply cutting idle memory usage and simplifying deployment.
- Built a 6-stage offline extraction pipeline (PaddleOCR → local LLM → key-value extraction → confidence scoring) parsing invoices, receipts & ID cards into structured JSON entirely on-device — no cloud dependency.
- Designed a **RAG layer** (ChromaDB + sentence embeddings) for cross-document search, field-correction memory, and template inference, with confidence-gated auto-accept (0.90) and human-review (0.55) thresholds.

Saleslytics AI — *Sales Analytics & Forecasting Platform* | Python, FastAPI, React, XGBoost, Gemini API, Firebase

2026

- Built an ML-powered analytics platform turning uploaded CSVs into **KPIs, regional breakdowns, and anomaly detection** via interactive dashboards.
- Implemented **multi-model revenue forecasting** (XGBoost, LSTM, Random Forest) with explainable AI output, and integrated **Gemini API** for natural-language business insights.

TruthScan AI — *Misinformation Detection* | Python, Scikit-learn, LinearSVC, TF-IDF, Flask

2025

- Built and deployed a binary fake-news classifier (**LinearSVC + TF-IDF**) as a Flask API with a full preprocessing-to-inference NLP pipeline.
- Designed an editorial-style investigative UI, prioritizing transparent, evidence-first presentation of model predictions over a black-box score.

Technical Skills

Languages: Python, JavaScript, C, C++, Java

AI / ML: Scikit-learn, PyTorch, TensorFlow, PaddleOCR, Ollama (Llama, Qwen, Gemma), ChromaDB, Claude API

Backend & Infra: FastAPI, Flask, REST APIs, asyncio, SQLite, PostgreSQL

Frontend & Tools: React, HTML, CSS, Git, GitHub, VS Code, Power BI

Languages

Tamil, English

Soft Skills

- Self-directed execution
- Problem-solving under hardware constraints
- Fast self-taught learner
- Cross-domain adaptability

Training & Workshops

Robo Miracle Technologies — Robotics & Automation Workshop

Feb 2024

- Programmed robotic systems using sensors, actuators, and control logic; explored AI-powered robotics in industrial settings.
